PRESIDENT'S CORNER

By Bud Hughes K4CWG

The TARC computer class held its last session Friday, May 13. I want to thank Tom, AD4NA for another job well done in his teaching the class and for the many hours that he put into the preparation of and administering the class. Tom, you are a real asset to this club.

>To the students who had to endure a less than ideal meeting place, I hope you understand it was the best we had to offer. Congratulations to you for your achievements in the steps toward enhancing your computer skills.

>At our next club meeting, Dan KE4BBR will have the program, and he and his Field Day committee will be putting the final touches on the Field Day preparations. Dan will be calling on many of us to assist. As always, Field Day is a great time for the club to get together and enjoy each others company as well as improve our operating skills....not to mention how to shoot an arrow over tree limbs, erect an antenna (or supervise the same from a safe distance), and of course partake of the food, sodas, coffee, etc. as the food committee serves up.

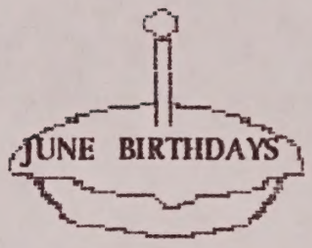
>To our members who are away for the summer, we want you to know we miss you and look forward to your return.

Progress is being made to get the third 2 meter repeater (145.49 Mhz - Archie WN3DHI custodian) up and running. We are going to discuss ways to raise funds at the next meeting for the purchase of needed equipment. We want to install a repeater with good coverage, autopatch, as well as the bells and whistles now on the 146.91 repeater. My requests is that all club members be thinking of ways to finance the new repeater and share your thoughts.

>In your own way, please remember the families of two of our dear friends who have become silent keys. Funeral service for WA2IDZ, Richman Manhertz was Saturday, May 7, and the following week WB4YKP, Robert Claudy was laid to rest. Our hearts are saddened by your not being in our midst. Rest in peace my friends. Our sympathy goes out to Vern, KB4RBU. His wife, Mary, recently passed away after a lengthy illness.

>The club meeting needs you! If you need transportation, give me or Sherry a call at 269-0779 and we will arrange for you to get to the meeting. 73's

MEETING DATE: MAY 24, AT 7:00 PM
MEETING PLACE: JAYCEE BUILDING ON NORTH SINGLETON



6/1 : KD4TLS Ben Mcmahab
6/3 : KD4SRN Rey Bonilla

91 REPEATER GETS NEW HARDLINE
By K4EOS (with help from K4SJC)

Long overdue and plagued by leakage on the old line, the club recently made a purchase of 150' of 7/8" Andrew Brand Hardline from Jerry, KC4UFI for $150 (retails new for $2.50 per foot). A nice savings to TARC.
>On May 7, a "work party" descended on the 91 site and proceeded to take the old line down and replace it. Les, K4SJC had reworked the ends of the line to put this in good shape for the replacement.
>Unlike some previous tank work, this time the wasps and hornets were missing. The climbers appreciated this. After lots of sweat and work, the line was up. Those present were Les K4SJC, Archie WN3DHI, Harry (not yet), George KD4CBV, Bud K4CWG, Tom AD4NA, Dave WB4SIG, Waren KD4ROT. If I missed anyone, please excuse. The improvement from my QTH (1.5 miles West of I-95 on SR 46) is noticeable.
>For the members who haven't eyeballed the home of 91, go south on Barna past Hwy 50 to just beyond the first church. Look left at the Titusville water tank. The antennas you can see on the top; the repeaters are in the metal building below the tank.
>It takes a lot of work and expertise to keep the repeaters going and the Technical Committee deserves a vote of thanks for that. We are fortunate to have people to maintain our systems.
>There are plans in the works for expansion to our repeaters, so keep your ears open!

MEET KE4BBS-BOBBI AND KE4BBR-DAN WOOD

Bobbi, from Philadelphia, met Dan while she was vacationing in California, back in '73. It took him about eight more weeks to get her back there, for good! But, only after three months of the California fun and sun, they packed off to Europe, where they lived for many years. While Dan was doing his thing as the Director of Finance for General Electric's nuclear energy operations in Spain and Italy, Bobbi learned new life styles, how to speak "spantalian", and how to cook all those marvelous dishes that Mediterranean folks take for granted! Tuff-stuff duty!

Business situations required bunches of travel, so they got to see much of the world during those years. In fact, last on their list these days is travel! They decided to retire to this area in order to enjoy some time in the "slow-lane". They both like to paint: she on fabrics, he on canvas; and they recently upgraded their ham tickets to advanced class. They dote on an 85 pound Doberman named "Paco", who permits them to live in his house; and they are enjoying very much this thing called "retirement"!

DON'T ASK HOW IT WORKS, JUST TRY IT!

Take your age and multiply by two; add five; multiply by fifty; subtract 365; add the loose change in your pocket (under one dollar) then add 115. The first two figures in the answer will be your age, the last two figures will be the change in your pocket.

FCC SAYS REPEATER TRUSTEES CAN BAN USERS

From Newsline Radio

The Federal Communications Commission has told the attorney for a southern California radio club that the license holder to its repeater can kick any ham off the system that he deems unfit to use the machine. In doing so, the FCC seems to have set the stage for a total re-evaluation of the way every repeater in the nation is operated.

The issue of what rights a repeater licensee has over the control of his repeater came into sharp focus on February the 1st. This, in a letter of interpretation of Section 97.205, subpart E of the FCC Amateur Service rules. Section 97.205 E says in part - and we quote - "limiting the use of a repeater to only certain user stations is permissible." That language has been on the books for years. Some repeater licensees are probably not aware the rule exists, much less understand the power it gives them. Moreover, until now the FCC has given repeater licensees wide latitude in its interpretation.

But a far narrower reading has now come as the result of a request for clarification sought by Attorney Sidney Radus, N6OMS of Orange, California. Radus is the attorney representing the Claremont Amateur Repeater Association in its fight against some unwanted users of its repeaters.

In preparation of a civil complaint against one user, Radus wrote to the FCC's Private Radio Bureau to find out exactly where his client stood in regard to Part 97.205 E. His inquiry was answered by Personal Radio Branch Chief John B. Johnston W3BE. Johnston is well versed in Part 97 regulatory matters in that he was the guiding hand that crafted the latest version. After quoting section 97.205 E, Johnson added the rule applies whether a repeater is coordinated as an "open" or "closed" repeater. In fact, Johnston says - and again we quote - "Rule 97.205 E without qualification, permits the individual responsible for proper operation of a repeater to limit the use of a repeater to certain user stations." - end quote.

As previously reported, the legal action taken was to obtain a restraining order against Tim W. Seawolf of Quail Valley, California. Its now been learned that the Johnston letter was accepted by the civil court as evidence in the case. We will be covering that part of the story in greater detail next week.

But looked at on a much broader scale, this new interpretation of Section 97.205 E is the really important story. This, because it holds the potential of impacting on the way that every ham who uses a repeater to make contacts operates on the air. The FCC now seems to be saying that in effect, there is really no difference between an open or closed repeater. Rather that all repeaters are essentially closed and that the ability of anyone of us to operate through one is at the will and the whim of the person that holds the license to a given machine. In fact, Johnston's letter goes even further than that. It just about mandates that repeater licensees act to ban anyone who in any way may cause the repeaters operation to violate any FCC part 97 rule.

This is truly a precedent setting regulatory interpretation by the FCC. Its one that will forever change the way in which all repeaters are operated and the way in which a repeater licensee is required to police his systems and control his user base.

SPREAD SPECTRUM

From Newsline Radio

The Commission has responded cautiously to a proposal to ease restrictions on spread spectrum signals on amateur frequencies. At their January 21st meeting, the ARRL's Board of Directors voted to ask the Commission to relax the restrictions. Whether they will actually remains to be seen. Ralph Haller, N4RH, Chief of the FCC's Private Radio Bureau, indicates the idea will have to be reviewed carefully.

"I would like to allow all the technologies that we possibly can. There are some concerns, our Field Bureau is concerned about being able to monitor the transmissions as a part of their functions. And so once again we need to balance that, but as far as I am concerned we should be as unintrusive as possible in our restrictions on amateur communications." Ralph Haller, N4RH, Chief of the FCC Private Radio Bureau.

Spread spectrum signals cannot be monitored with conventional FM receivers, and that's what concerns the Commission. Spread spectrum is popular with military agencies, because the transmissions are virtually impossible to monitor. Certain types of spread spectrum signals are legal on amateur frequencies above 420 MHz.

THIS AND THAT
By Joan Hoag

CATS are rather delicate creatures and subject to a good many ailments, but I never heard of any who had insomnia.

Joseph Wood Crutch

All knowledge is but remembrance. Plato

The true art of memory is attention.

Samuel Johnson

Afraid you'll forget that wonderful idea that came to you in the middle of the night? Just turn the clock around or throw your slipper under the bed. The next morning this out-of-place item will remind you of what you feared to forget.

Courage is doing what you're afraid to do. There can be no courage unless you're scared.

Eddie Rickenbacker

If you have knowledge, let others light their candles at it. Margaret Fuller

I cannot give you the formula for success, but I can for failure. Try to please everybody.

Herbert Swope

Taking a horse into a garage doesn't turn it into an automobile. Billy Sunday.

A Scotsman, an Irishman, an Englishman and a Welshman agreed that whenever one of them died, the others would put $5 on his coffin. The Welshman died first and the Irishman and Englishman duly kept their promise. The Scotsman, a more astute fellow, solemnly placed on the coffin a check for $15 and pocketed the other two fives. "He'll not be wanting to cash it just now," he whispered.

Jeanne was greatly loved because she always had something good to say about people and never said an unkind thing. One day her friend remarked, "Jeanne, I do believe you'd say a good work for the devil himself." "Oh well, he may not be as good as he ought, but he's a real industrious fellow, for all that!" said Jeanne.

"All of us," said the minister, "are guilty of sin." Leaning dramatically forward over the pulpit he challenged his congregation saying, "I've never heard of a perfect man. Have you?" "Yes," said a small man at the back. The minister raised his eyebrows. "Indeed, would you mind telling us who he might be?" With a glance toward heaven the man replied "My wife's first husband!" Francis Gay

Colonel Andersen, a retired officer living in Pittsburg in the last century offered the use of his personal library to some young boys he was concerned about. They had no chance to read good books and he could not afford to buy any for them. Andy, a boy who made $4 a week, jumped at this chance. Each week he returned a book and borrowed a new one. These books helped kindle a great career. Without him, America and Great Britain might never have had free libraries. For Andy was none other than the founder of so many public libraries, Andrew Carnegie. Francis Gay

(The library of my youth - a place of magic - was given by Andrew Carnegie. The collection was unbelievable. Any book on any subject was either there or readily obtained. I bless Mr. Carnegie now as I did then. Joan)

A catholic Priest, anxious to be friends with his fellow clergymen, invited a Protestant minister to his home. When the minister arrived he was shown into a tastefully furnished living room with wall-to-wall carpet, soft, comfortable chairs and fine pictures. "My goodness, you priests certainly do live well." The priest smiled. "Ah, yes," he nodded. You have better halves, my friend, but we have better quarters."

Francis Gay

The Sunday school class was asked to draw a picture of their favorite Old Testament story, but the teacher couldn't understand what one small boy was depicting. The picture was of a man driving a car with two scantily dressed passengers in the back seat. The young artist was surprised that he had to exlplain it. "Well," he said, "it says in the Bible God DROVE Adam and Eve out of the Garden of Eden."

The scientists have ample proof
Proof no one can deny,
That by accepted theories - well,
The Bumblebee can't fly!
With fat and rounded fuselage,
With such small fragile wings,
He cannot even leave the ground....
Bugs are but crawling things!
Yet, though these facts may all be true,
And proved by people wise,
The Bumblebee - not knowing this
Just goes ahead and flies
Francis Gay

APRIL MEETING
By Bobbi Sue KE4BBS

The meeting was called to order at 1905 hours by our V.P. KC4SYD-Cliff, sitting in for a very exhausted Bud (who was present, but just barely after some 35 or so hours on the job without sleep).

>Another GREAT turnout - 82 of us! Can you believe, we've had an average attendance of 81 so far this year? And the lowest was 71! WOW!

>After the Pledge of Allegiance, silent prayer, and introductions, the guest speaker was introduced by KE4AEB, Joe. Detective Ralph Warren of the Titusville Police spoke to us on the use/abuse of personal firearms - and what a talk! It was quite apparent that Detective Warren's subject matter was of very high interest to his audience, and their excited contributions and interruptions obviously underscored the effectiveness of his presentation. He did it so very well! Certainly do hope that Detective Warren is typical and representative of our city's law enforcement personnel. Thank you, sir!

>After the break and some great "numbers" offered by KD4VFQ, Kay, we found the 50/50 purse had been won by KD4RQT, Warren (yep, the same guy who "cheated" in the mosquito picnic pie eating contest). Sooo, the drawing may be subjected to audit, pending membership attitude!

The following items then were addressed:

1. N4SCY, Ozzie, named and thanked all the TARC volunteers who helped out during the "Tour de Cure" bike race last sunday. The race is an annual event which recognizes and contributes to the American Diabetic Assn.
2. AD4NA, Tom, summarized his plans for the upcoming classes re home computers scheduled for next week. An entrance fee of $10.00 is intended to cover the cost of class materials.
3. KE4BBR, Dan, updated the Field Day program status and he noted that the May meeting will be devoted to that event. Even though the planners have been doing bunches of homework for us, they need and look forward to your advice and input for the final game plan details. The members approved a budget of $300 for Field Day, consistent with prior years' expenditures.
4. KC4SYD, Cliff, noted that check in activity during the Thursday nets has been slowing down, and he asked for more support for those nets. Incidently, I've found his "Bulletin Boards" are worth the price (?) and I rather look forward to them each week.
5. The new club I.D. badges were distributed, thanks to much work by KD4SRN, Reynaldo and KE4AGL, Ralph, and they really look neat! Now, please try to remember to wear them for all club functions, okay? (Don't embarrass me because I can't remember your call - let me read it and sound smart)! Photos/update info will be collected for new badges during the May meeting.
6. K4EOS, Clyde, presented a brief Treasurer's Report, and we are keeping in the black. He explained why it is so important that we all ante up our annual dues in a timely manner, and he thanked those who have already done so this year. Clyde also suggested that we might look for some commercial advertising opportunities in order to defray some of the newsletter costs, and he noted that Expedient Services plans to place an ad in the next issue.
7. K4SGR, Alan (Major, Florida Marine Patrol) discussed his plan to operate a Field Day station unassociated with TARC from one of the Patrol's boats. He explained his intent was to demonstrate to his people in Tallahassee the value of ham radios when used (in this case simulated) emergency conditions. He emphasized that he did not wish to interfere with, nor to compete with the TARC program.
8. It was noted that KE4BBN, Nick, (our youngest member) had been spotted on TV. Seems that the Channel 9 news folks did an interview with Nick as a result of his recent invention regarding a laser-safety pool operation. Only one thing, Nick. Next time wear your red TARC shirt. Okay?
9. KC4YDP, Jerry, reported on the test session which occurred just prior to the meeting. 9 tests were administered, and 8 upgrades resulted!
10. KD4HNW, Ken, (the next fox) advised he hopes to get the "hounds" unleashed and on the run come the Sunday after Mother's Day.
11. There was some discussion regarding the recent Indian River Raft Race, and our participation as helpers. But it seemed there may be interest in an actual TARC entry next year. Yes, I can see it now: Nick and his Channel 9 Newseys filming the maiden voyage of the "TARTANIC"!

The meeting ended about 9:30.

Some of us went home and some of us ended up at "Dogs . . ." for a late snack. It was something of an education for me to see what TARC-folk call a "snack"! But, I think I'll recover before the next meeting.

See y'all then!

EMERGENCY UPDATE
By Ralph KE4AGL

Ray Kassis, N4LEM will be with us again at the May 23 meeting to take pictures for ARES and TARC identification cards. With the hurricane season upon us it is imperative that identification cards be issued for volunteers who will be working in case a hurricane strikes or a major emergency is encountered.

A DRAFT set of by-laws is being developed for the combining of ARES and RACES into a proposed unit called "BEARS" (Brevard Emergency Amateur Radio Service). The final agreement seems to be that the Amateur Radio Clubs in Brevard will develop their own Emergency plans and coordinate them with the BEARS for execution. To that end, the by-laws have been developed.

The AAU/USA has requested that Brevard supply volunteers to help with the Junior Olympics to be staged July 22 through August 14 of this year. There seems to be two different basic needs: 1) a group to work with the program events and 2) a group to work with the security and management program. North Brevard will be hosting at three locations: Playalinda Beach for the surfing events; BCC-Titusville for wrestling; and Astronaut High School for an unspecified event. A crowd of thirty to forty thousand people is expected at these events.

TARC can expect to participate in a state-wide hurricane exercise in June (June 14-19 seems to be the expected period). The State Emergency Management team will be transmitting the plan by radio and cassette on the day of the event. It is expected that three areas in the State will be "hit" by a hurricane.

Members are requested to let it be known their interest and availability for Emergency Service during a hurricane and where they feel they can best serve. We have requests from the city to house a control station with the City Emergency team at the Titusville Police Station. We need people to man the evacuation center at Searstown Mall; we need volunteers to work at each fire station and at the Sheriff's office. We need volunteers to work with the Port St. John fire station and Mims fire station. (To date we have not had a request from Jess Parish Hospotal but most likely we should prepare for working with them and the ambulance service. Let Ralph (KE4AGL), Telephone 267-9418) know your availability plans as soon as possible.

ED. NOTE: Dave AC4JX, spends a lot of time listening to hams talk to each other as the drive around and through Florida. Their comments and complaints are enough to make him want to write the Governor. In fact, his first Letter to Lawton appears below.

LETTER TO LAWTON
By AC4JX Dave

Dear Lawton:

It's a wonder to me that residents of Florida don't go on strike during love bug season. The damage done to our cars and to our patience is appalling. It's also a wonder that tourists don't boycott Flordia during love bug season. They spend more time cleaning love bugs off their cars than they spend money at our attractions. The state spends lots of money to spray for mosquitoes. It seems that if any spraying is done for love bugs, it must be with a fertility drug rather than a pesticide. There surely must be a way to control those pesky love bugs.

Also, lots of people want to know when you are going to reopen those closed roadside parks. It seems to me there is a greater degree of danger to the motorist from those long distance haulers who now must park on the side of the interstate to get some rest than there is from random vandalism.

Thanks for listening. Lawton. We'll be writing to you from time to time to pass along the good and bad comments we overhear from motorist about our wonderful state.

Sincerely,

ABELL'S ANECDPTES
By Pike Abell K4EPU

2000 MILES OF TOILET PAPER

Some time ago Clara and I traveled by car from Titusville, Florida to Little Rock, Arkansas on interstate highways through Florida, Alabama, Louisiana, Mississippi and Arkansas. Obviously, traveling that distance (over 2000 miles) mostly on interstate highways, on numerous occasions advantage is taken of facilities provided at rest areas. Over the last few years there have been many improvements in rest area facilities, particularly in Florida, where several new ones have been built with exit doors either opening outward or no doors at all. More about that later.

The following comments are based on observations made at rest areas during that trip. One improvement (?) which has been made in recent years is that, in most places now, the toilet paper is contained in large drums. I suppose the reason is, it is not necessary to reload as often as it is with the small roll mounted on the wall. However, the problem I find with the large drums is, more often than not, the end of the paper roll is hardly ever protruding from the opening at the bottom. What one has to do is reach up through the opening and spin the roll to free the paper end. Trouble with this is, you don't ever know which way to spin it. Therefore, you have to experiment to figure out which way to spin it, then spin it in the right direction fast enough for the centrifugal force to be srong enough to throw the paper end away from the roll and out the opening. To compound the problem, in most places, the drum is mounted only a foot or so above the floor, so you almost have to get down on your knees to reach in there. About shoulder high would seem to be most convenient. At that height one could look up through the opening and see how to free the paper end while still sitting on the stool.

I am not handicapped, thank goodness. But I cannot help but notice that, even though there are prominent signs posted indicating that the facilities are equipped for the handicapped, in a good percentage of the rest rooms there are gross violations of that. For example, some water faucets at the wash basins are spring loaded so that you grasp it to turn the water on. When you release it the water immediately shuts off. I often wonder how a person with one arm would ever be able to wash his only hand without assistance.

In at least two rest areas in Arkansas they had paper towels. Great! All others in all states had blow dryers. Most of them never heat up, or begin warming up just as it automatically shuts off. If they heated up like they are supposed to, paper towels would probably be more economical. Also, when one washes ones face, how on earth does he go about drying it with the blow dryer? Finally, except in Florida, in nearly all of the rest areas the rest room doors open inward. That in itself is a gross safety violation. Of most concern to me however, is that I shudder to think of the necessity of having to touch the door handle to open the door when leaving. Especially when, while I am washing my hands, sometimes without soap because the soap dispensers are often empty, I see people going out the door from the toilet area without stopping to wash their hands and watching them grasp the door handle. wondering just how unclean their hands are, and how I can get out the door without touching the handle.....
